Toilet renovation kit

Extremely powerful on stubborn deposits

Hygienically cleans and renews
Safe for enamel & chrome

HG toilet renovation kit

- removes even the most stubborn stains
- gives your toilet pan a new lease of life
- extremely powerful

The glaze on a toilet pan becomes more porous as it gets older. Deposits such as limescale or uric scale stick to it more easily and mix with other dirt. These generally persistent deposits are not only found in the visible parts of the toilet, (such as the neck, for example), but also hidden under the rim.

The deposits under the rim of the toilet pan prevent the toilet from ever being truly hygienically clean and leaves a persistently musty smell in the toilet. Deposits under the rim reduce the flushing action of the toilet.

The *HG toilet renovation kit* can be used to remove these deposits effectively. The content of this *HG toilet renovation kit* consists of the following products:

- 1 bottle of *HG toilet renovation cleaner*, a super powerful cleaner, developed especially to remove even the most persistent deposits from the toilet pan
- 1 absolutely non-scratch, but extremely effective, *HG scrubbing pad* to remove even the most persistent deposits
- 1 convenient *HG scrubber*, for easy scrubbing of the inside of the pan and for scrubbing under the rim and in the neck
- 2 plastic gloves

The specially developed formula of *HG toilet renovation cleaner* adheres to the surface of the pan and, in combination with the handy scrubber and the absolutely non-scratch, but extremely effective, scrubbing pad, it ensures removal of the most persistent deposits. After use, the toilet pan is truly hygienically clean and fresh smelling again, giving it a new lease of life. **Transport and store the box upright.** This product is not suitable for septic tanks.

HG toilet renovation cleaner

- removes even the most stubborn stains
- gives your toilet pan a new lease of life
- extremely powerful

Attention: This product is part of the *HG toilet renovation kit*. You need the special scrubber and the non-scratch, but extremely effective, scrubbing pad (to support the performance of *HG toilet renovation cleaner*) to clean the toilet pan, particularly under the rim and in the neck.

Introduction: The glaze on a toilet pan becomes more porous as it gets older. Deposits such as limescale or uric scale stick to it more easily and mix with other dirt. These generally very persistent deposits are not only found in the visible parts of the toilet, (such as the neck, for example), but also hidden under the rim. The deposits under the rim of the toilet pan in particular prevent the toilet from ever being truly hygienically clean and leaves a persistently musty smell in the toilet. Deposits under the rim reduce the flushing action of the toilet. The specially developed formula of *HG toilet renovation cleaner* adheres to the surface of the pan and, in combination with the handy scrubber and very effective scrubbing pad, ensures total removal of the most persistent deposits. After use, the toilet pan is truly hygienically clean and fresh smelling again, giving it a new lease of life.

Directions for use: To clean the inside of the toilet pan and under the rim: Squeeze the sides of the lid and simultaneously turn the lid to open. Spray *HG toilet renovation cleaner* in a fluid motion deep under the rim of the toilet pan and in the pan. Leave the gel to work for at least 20-30 minutes and push the scrubbing pad on the tip of the scrubber and press it down properly. Then push the scrubbing pad in the three open teeth of the scrubber. After soaking, scrub the toilet pan and under the rim vigorously. Regularly spray the scrubbing pad with *HG toilet renovation cleaner* (both the front, the back and the top of the scrubbing pad). Now leave the product to work for another 5 more minutes before flushing the toilet. Repeat the treatment if necessary. Hold the scrubber in the pan and flush once more to rinse the fluid remnants from the scrubbing pad.

To clean the neck of the toilet pan: Depending on how dirty it is, pour up to half a bottle of *HG toilet renovation cleaner* into the water in the neck. Leave the product to work from 30 minutes to an entire night, and then use the scrubber and scrubbing pad to scrub away the deposits. Then flush the toilet at least twice. Repeat the treatment if required.

Attention: Transport and store the bottle upright. This product is not suitable for septic tanks. Prevent contact with marble and other calciferous surfaces.
