Wallpaper remover

Quick wallpaper removal

For up to 200 m² of wallpaper

Super-concentrated formula

HG wallpaper remover

- super concentrated
- simply the best
- for max. 200 m²

Stripping wallpaper made easy! No more messy work with a steam machine and disintegrating wallpaper. *HG wallpaper remover* is a super-concentrated and extremely powerful substance capable of dissolving any type of wallpaper glue, which causes any sort of wall paper to simply fall off the wall. And it does it in complete strips at a time!

Directions for use:
Preliminary treatment: Washable, water-resistant, vinyl, metallic or emulsion painted wallpaper must first be opened up using course sandpaper. With wallpaper that can be stripped off you must first remove the top, outer layer. Ordinary paper and absorbent types of wallpaper do not require this preliminary treatment.

Dosage: Light weight wallpaper: 125 ml per 10 litres of water (1/4 of this bottle)
Heavy wallpaper: 250 ml per 10 litres of water. (1/2 of this bottle)

Removing the wallpaper:
1. The easiest way to apply the solution is by using a pumppressure spray or a plant spray. You can also apply using a large brush or a sponge.
2. Moisten the wallpaper thoroughly.
3. Let it soak in for between 5 and 15 minutes.
4. If the wallpaper dries (becomes matt) after a few minutes, repeat step 2.
5. Make a start by loosening a corner, using a scraper or a filling-knife if needed.
6. Continue removing the thoroughly wet wallpaper using zig-zag motions. Try to remove the wallpaper in whole strips if possible. If this is difficult use a scraper or filling-knife.

Coverage: for the removal of 100-200 m² wallpaper.

Attention: Transport and store the bottle upright. Avoid contact with furniture and floors preferably by covering them.
